

5.56  
3 20  
2 36

Thurs 10/3/85

[ units proceeds to level 17 - 18  
( 5.56 - (1.15 + 1.70) ) or 2.36 mmSL ]  
lot 218 shows frag of fibula, clearly  
broken prior to recovery. Paleontols  
for various fauna removed once clear  
not human.

Finding of fibula, broken, isolated as well  
as previous minor finds suggests  
disarticulated remains may <sup>not</sup> be  
an artifact of backbone/wellpt activity.

Human fibula from 0114/E67 (Lot 218)

Chili Dordella for Hal Good tonight!

10/4/85 FRIDAY

pole datums as much <sup>8 AM</sup> as +3.5 cm off (all  
plus), rising changes in pole datums from  
(H/D + D)<sup>2</sup> not out in AM (doing  
abstracts for MPA).

pole datums not adjusted until monday.

more bone arising - lot 218, 230, 217

phalanges, fragment of tibia (distal), etc -  
level 17's all of 'em.

light scatter, disarticulated.

Enter jaw, ankle bone (sic) also incl human

as the fossils  
(fish tank  
in lab)
