

5.56
3 20
2 36

Thurs 10/3/85

[units proceed to level 17 - 18
(5.56 - (1.15 + 1.70)) or 2.36 mmSL]
lot 218 shows frag of fibula, clearly
broken prior to recovery. Paleontols
for various fauna removed once clear
not human.

Finding of fibula, broken, isolated as well
as previous minor finds suggests
disarticulated remains may ^{not} be
an artifact of backbone/wellpt activity.

Human fibula from 0114/E67 (Lot 218)

Chili Bordello for Hal Good tonight!

10/4/85 FRIDAY

pole datums as much as ^{8 AM} + 3.5 cm off (all
plus), rising changes in pole datums from
(HD + D)² not out in AM (doing
abstracts for MPA).

pole datums not adjusted until Monday.

more bone arising - lot 218, 230, 217

phalanges, fragment of tibia (distal), etc -
level 17's all of 'em.

light scatter, disarticulated.

Enter jaw, ankle bone (sic) also in (human)

as the fossils
(fish tank
in it)
